Abstracts

Connected vending machine is a machine that dispenses items such as snacks, beverages, alcohol, cigarettes, lottery tickets to customers automatically, after the customer inserts currency or credit into the machine. The first modern vending machines were developed in England in the early 20th century and dispensed postcards. Connected vending machine is the contactless payment-enabled vending machines that support both online payment and site payment. It can also calculate the amount of the sold products and send messages automatically when the products are going to be sold out.

Scope of the Report:

This report focuses on the Connected Vending Machine in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. The first solutions for including connectivity in vending machines became commercially available already two decades ago. It has still taken years for the technology to gain the interest of mainstream vending operators. The market has nevertheless gained momentum in recent years as more and more vending operators have started to deploy cashless payment systems and vending telemetry solutions at a larger scale. Demand for cashless payments is currently the main market driver. However, vending telemetry is forecasted to have a more transformational effect on the industry in the future as these solutions enable vending operators to substantially improve their operational efficiency. The global installed base of connected vending machines grew by 16.22 percent to over 140 thousand units in 2014.

The vending machine industry is undergoing a digital transformation as it seeks to

embrace the growing trend toward Internet-connected devices to attract and engage more customers. Adding 'intelligence' to vending machines provides a more personal, interactive and fun experience for consumers while allowing brands and operators to use cloud services and data analytics, leading to reduced operating costs and the establishment of new innovative business models within the vending sector.

The worldwide market for Connected Vending Machine is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
