According to our (Global Info Research) latest study, the global Constant Current LED Driver market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

The LED constant current driver is a voltage converter that converts the power supply into a specific voltage and current to drive the LED to emit light. Usually, the input of the LED driver power supply includes high-voltage power frequency AC (ie mains), low-voltage DC, high-voltage DC, low-voltage High frequency AC (such as the output of electronic transformers), etc. The output of the LED drive power supply is mostly a constant current source that can change the voltage with the change of the LED forward voltage drop value.
