The global Constant Current LED Lighting Power Supply market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

LED constant-current power supply is a kind of LED power supply. It is a voltage converter that converts the power supply into a specific voltage and current to drive LED lighting. In essence, it uses the device to feedback the current, dynamically adjust the power supply status of the device, so that the current tends to be constant. Generally, the input of LED drive power supply includes high-voltage power frequency AC (i.e. mains power), low-voltage DC, high-voltage DC, low-voltage high-frequency AC (such as the output of electronic transformer), etc.
