## Abstracts

The global Constant Filling Fluid Coupling market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Fluid coupling operational principle is the drive wheel and driven wheel are fitted with radial rotor blades and there is no mechanical connection between them. The coupling is filled with a specific amount of fluid (mineral oil or a mixture of mineral oil and water). The main torque generated by the drive machine is converted into operating fluid hydrokinetic energy through a fluid swirl which circulates between the rotor blades in the drive wheel and in the running wheel. This energy is then reconverted into a mechanical torque and conveyed to the driven machine shaft. This report focuses on
