Constant head permeability apparatus is a laboratory instrument used to determine the coefficient of permeability of a soil sample. It consists of a metal or plastic water chamber with an inlet and outlet, a standpipe, and a soil specimen holder. The specimen holder is typically made of porous stone or sintered metal and is used to hold the soil sample in place. The constant head permeability apparatus is commonly used in civil engineering and geotechnical engineering to evaluate the suitability of soils for various applications, such as foundations, embankments, and retaining walls.
