Constant Head Permeameter is an experimental device used to measure the permeability performance of soil or geotechnical materials. It calculates the permeability coefficient of the material by applying a constant head difference at both ends of the sample, allowing water to pass through the sample, and measuring the flow rate and time of the water flow. This kind of equipment is widely used in geotechnical engineering and environmental engineering fields, such as road construction, earth-rock dam engineering, slope protection, landfill design, etc., to evaluate the permeability, drainage performance and anti-seepage capacity of materials.
