Abstracts

The global Constant Pressure Insufflator market size is expected to reach $ 1308 million by 2032, rising at a market growth of 7.7% CAGR during the forecast period (2026-2032).

In 2025, global Constant Pressure Insufflator production reached approximately 131 thousand units, with an average global market price of around USD 5,800 per unit. The gross profit margin of major companies in the industry was approximately 42%–65%. In 2025, global production capacity was approximately 170 thousand units. Constant Pressure Insufflators are medical devices designed to maintain stable pneumoperitoneum pressure by automatically regulating carbon dioxide flow during minimally invasive surgery. They are widely used in laparoscopic, thoracoscopic, gynecological, and urological procedures. The upstream industry includes sensors, valves, electronic components, gas control modules, and medical-grade plastics. Midstream covers equipment manufacturing, assembly, calibration, and testing. Downstream users include hospitals, ambulatory surgical centers, and specialty clinics.

Constant pressure insufflators supply stable carbon dioxide for laparoscopic minimally invasive surgery to maintain surgical cavity space, with precise pressure control and safety protection mechanism. Minimally invasive surgery popularization drives market expansion. New models add real-time gas filtration and automatic pressure compensation functions.
