## Abstracts

According to our (Global Info Research) latest study, the global Constant Speed Propeller market size was valued at USD 1821.2 million in 2023 and is forecast to a readjusted size of USD 2265.5 million by 2030 with a CAGR of 3.2% during review period.

A constant speed propeller is a variable-pitch aircraft propeller that automatically changes its blade pitch in order to maintain a chosen rotational speed. The power delivered is proportional to the arithmetic product of rotational speed and torque (radians/second  $\times$  torque), and the propeller operation places emphasis on torque. The operation better suits modern engines, particularly supercharged and gas turbine types.

Here are three advantages of constant speed props: optimized performance in each stage of flight, improved fuel efficiency and reduced strain on the engine.
