The global Constant Temperature Internal Heating Glue Gun market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

A thermostatic internally heated glue gun is a glue gun designed to maintain the proper viscosity and fluidity during application by keeping glue (or other adhesives) within a certain temperature range. This type of glue gun usually includes some temperature control system to keep the temperature of the glue stable while it is sprayed or applied. These glue guns are often used in applications that require precise control of glue temperature to ensure the glue performs well while working. Whether for automated applications in manufacturing processes or precision applications in manual operations, this glue gun provides controlled, stable glue temperatures.
