Abstracts

According to our (Global Info Research) latest study, the global Construction Aluminium Profiles market size was valued at US$ 14970 million in 2025 and is forecast to a readjusted size of US$ 19650 million by 2032 with a CAGR of 4.0% during review period.

Construction aluminium profiles are extruded aluminium-alloy sections designed for façade, window, railing and structural applications in buildings, offering good machinability, surface finishability and long-term corrosion resistance. Production in 2024 was 4.24 million tons and the average price was $3,300 per ton. Typical single-line annual capacity was about 5,000 tons and the average gross margin was about 13%. The upstream includes electrolytic aluminium ingots, alloying elements (mainly magnesium and silicon) and the manufacture of casting-rolling, hot-rolling and surface-treatment equipment, with representative suppliers including Alcoa, Rio Tinto, Rusal and Aluminum Corporation of China. The midstream covers alloy melting, extrusion or rolling, ageing, precision cutting and surface treatment to secure dimensional tolerance, surface consistency and mechanical performance. The downstream serves doors and windows, curtain walls, fences and handrails, with typical customers including Schüco, Kawneer, Reynaers, Hydro Building Systems, Technal, and Aluprof.

Construction aluminium profiles are expected to maintain steady demand growth as global building systems shift toward lighter, more durable and energy-efficient materials. Driven by the replacement of traditional steel frames, the acceleration of green building standards and the expansion of prefabricated construction, aluminium profiles will continue to gain share in windows and doors, curtain walls and structural façade systems. Moreover, urban renewal projects and the need for high-performance thermal-
