Abstracts

According to our (Global Info Research) latest study, the global Construction Apps market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Increasingly, construction professionals have sought to harness the power of mobile devices to do their jobs more effectively. In response, more and more construction software vendors are offering companion applications (some being fully featured while others only offer a few core features) for iOS, Android and Windows smart devices.

The flexibility these apps provide allows construction professionals to be where they're needed most—at the work site instead of the office—while still being able to execute on critical tasks.

One important thing to note is that some construction apps are not standalone apps, meaning that you will have to have purchased the desktop or subscription software before you can use the app. These “paired” apps are generally free from the app store but will not work unless you have an associated account with the software vendor.

On the other hand, some construction apps are standalone, meaning you can purchase them from the app store without having to purchase or subscribe to any additional software or services. Standalone apps, while cheaper in general, might not be as fully featured as apps that are paired with traditional software.

The Global Info Research report includes an overview of the development of the Construction Apps industry chain, the market status of iOS (Subscription Pricing, Perpetual License), Android (Subscription Pricing, Perpetual License), and key
