A construction bucket is a heavy-duty container designed for attachment to construction machinery such as excavators, loaders, or cranes. It is used to lift, transport, and deposit materials such as soil, gravel, sand, debris, or concrete on construction sites. Construction buckets come in various sizes and configurations, including general-purpose buckets, trenching buckets, grading buckets, and clamshell buckets, each optimized for specific tasks. They are typically made from durable materials like high-strength steel to withstand heavy loads and abrasive materials. Specialized buckets may also feature reinforced edges, teeth, or hydraulic mechanisms to enhance performance in digging, scooping, or material handling operations.
