Abstracts

Concrete core drilling involves drilling perfectly rounded holes in concrete walls, floors, ceiling, and other structures. This fine-tunes the concrete structure to accommodate conveniences like phone lines, plumbing, HVAC ducting, sprinkler systems and others.

Construction Concrete Core Drills are the most commonly used tools for this process. The core drill bit tends to consist of a steel tube impregnated with diamond segments on the drilling end. The concrete coring drill is mounted on the rotating shaft of a concrete core-drilling machine and is secured to the wall or floor in question. A solid cylindrical concrete core or “slug” is removed from the hole once the drilling is complete.

This report studies the global Construction Concrete Core Drills production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Construction Concrete Core Drills, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2021 as the base year.
