The global Construction Distribution Box market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

A Construction Distribution Box, also known as a Construction Power Distribution Box or Construction Spider Box, is a portable electrical distribution unit commonly used in construction sites to provide temporary power to construction equipment, tools, and lighting. These boxes are designed to safely and efficiently distribute power from a power source, such as a generator or utility power, to multiple outlets or receptacles on the construction site. Construction distribution boxes typically feature a rugged and durable enclosure that can withstand harsh job site conditions, including dust, moisture, and physical impacts. They are equipped with various outlets, circuit breakers, GFCI (Ground Fault Circuit Interrupter) protection, and other safety features to ensure proper power distribution and protect against electrical hazards.
