## Abstracts

According to our (Global Info Research) latest study, the global Construction Dry Mortar market size was valued at USD 16190 million in 2023 and is forecast to a readjusted size of USD 20350 million by 2030 with a CAGR of 3.3% during review period.

Construction Dry mortar is dry powder or granular material made by mixing dried screening process of fine aggregate, cementitious materials, additives, fillers, etc. Most of the dry mortar products contain both mineral cementitious binder (e.g. OPC) and polymer binder (e.g. re-dispersible powder) and they are normally packed in bags after mixing in the factory. Dry mortars offer three main advantages: firstly, they reduce quality problems caused by improper mixing conditions on small job-sites; secondly, they allow building much faster with ready-to-use, high performance products; thirdly, they save on labor costs.

Sika is one of the most important global key players of the construction dry mortar, other key players include Saint-Gobain Weber, Henkel, etc. Asia Pacific is the largest market, occupied for over 40 percent, followed by Europe.
