According to our (Global Info Research) latest study, the global Construction Fleet Management Software market size was valued at US\$ 2020 million in 2025 and is forecast to a readjusted size of US\$ 3066 million by 2032 with a CAGR of 6.2% during review period.

Construction fleet management software is an information tool specifically used for comprehensive management of vehicles (such as engineering vehicles, trucks, concrete mixer trucks, etc.) in construction scenarios. According to the priority, location, time requirements of the construction task, and the location and status of the vehicle, the algorithm is used to automatically dispatch the vehicle. For example, when there are multiple construction sites that need to transport construction materials, the software can quickly match the vehicles that are close to the material stacking point and the construction site and are in an idle state to arrange transportation tasks, thereby improving the efficiency of vehicle use. According to factors such as the vehicle's usage time, mileage, and operating conditions, a vehicle maintenance plan is automatically generated. For example, for a concrete mixer truck, when the operating time of the mixing device reaches a certain number of hours or the wear of the mixing blades reaches a certain standard, the software will remind the manager to arrange maintenance work to ensure that the key components of the vehicle can be maintained in a timely manner.
