Scope of the Report:

This report focuses on the Construction Lubricants in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

On the basis of base oil, the construction lubricants market has been segmented into mineral oil and synthetic oil (PAO, PAG, Esters, Group III). The mineral oil segment is projected to lead the construction lubricants market during the forecast period due to its easy availability and low cost.

Based on product type, the construction lubricants market has been segmented into hydraulic fluid, engine oil, gear oil, compressor oil, grease, Automatic Transmission Fluid (ATF), and others (brake fluid, rock drill oil, chain & cable fluid). Hydraulic fluid is the largest product type segment of the construction lubricants, in terms of volume. Hydraulic fluid is mainly used for power transmission and lubrication in various heavy load equipment used in the construction industry. To avoid equipment failure, operators need a good quality hydraulic fluid, which drives the hydraulic fluid consumption in the construction industry. The engine oil segment dominated the construction lubricants market in terms of value. This dominance is mainly due to its high cost and frequent replacement in various construction equipment and off-road vehicles.

The worldwide market for Construction Lubricants is expected to grow at a CAGR of roughly 4.6% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
