The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Construction machinery multiple directional control valves are hydraulic valves that control the flow of fluid in hydraulic systems used in construction equipment, such as excavators, bulldozers, loaders, and cranes. These valves are designed to regulate the direction of fluid flow, allowing the operator to control the movement and speed of hydraulic actuators, such as cylinders and motors, which in turn control the movement of the equipment's mechanical components. Multiple directional control valves have multiple ports that allow fluid to enter and exit the valve from different directions, providing flexibility and precision in controlling the hydraulic system.
