Abstracts

According to our (Global Info Research) latest study, the global Construction Machinery Rims market size was valued at US\$ 1370 million in 2025 and is forecast to a readjusted size of US\$ 1974 million by 2032 with a CAGR of 5.5% during review period.

Construction Machinery Rims are heavy-duty wheel assemblies designed to support and transmit loads for equipment such as loaders, excavators, dump trucks, graders, and cranes. They typically consist of rims, tires, hubs, and fastening systems engineered to withstand extreme loads, harsh terrain, impact, and continuous operation. Compared with standard automotive wheels, construction machinery rims emphasize structural strength, fatigue resistance, and durability rather than speed or comfort. As global infrastructure development, mining activity, and urbanization projects expand, construction machinery wheels remain a critical consumable and structural component that directly affects equipment stability, safety, and operating efficiency.

In 2024, global Construction Machinery Rims production reached approximately 5515.73 k units, with an average global market price of around US\$ 241.31 per unit. And global Construction Machinery Rims production capacity reached approximately 7500 k units. The average gross margin in this industry reached 18.61%.

In the upstream supply chain, construction machinery rims rely on high-strength steel, rubber compounds, forging and casting processes, and surface treatment technologies. Representative upstream suppliers include ArcelorMittal for high-strength steel, LANXESS for rubber and reinforcement additives, and Continental for off-highway tire technology. These materials and technologies determine load capacity, wear resistance, and service life. Midstream manufacturers focus on rim forming, welding,

heat treatment, tire assembly, and quality testing. Downstream, construction machinery wheels are supplied to equipment manufacturers and fleet operators such as Caterpillar, Komatsu, and Volvo Construction Equipment, where they are deployed in earthmoving, mining, and infrastructure projects. Ongoing investment in infrastructure and resource development supports stable downstream demand.
