According to our (Global Info Research) latest study, the global Consumer Electronics I2C EEPROM market size was valued at US\$ 370 million in 2025 and is forecast to a readjusted size of US\$ 550 million by 2032 with a CAGR of 5.9% during review period.

Consumer Electronics I2C EEPROMs are general-purpose non-volatile memory chips with I2C serial bus interfaces, specially designed for various consumer electronic products. Featuring low power consumption, compact size, stable performance and high cost performance, they can meet the demands for long-term storage of configuration parameters, device information and user data in home appliances, digital products, smart wearable devices and other terminals.

The price of consumer electronics I2C EEPROMs varies by storage capacity, package form and purchase volume. The unit price of mainstream commercial SOIC-8 packaged products ranges from 0.12 to 0.85 US dollars each. Small-capacity (1K~16Kbit) models are priced at 0.12 to 0.38 US dollars each, while medium and large-capacity (32K~512Kbit) models cost 0.36 to 0.85 US dollars each. Bulk orders enjoy a discount of 10% to 20%. The industrial chain is well-developed. The upstream includes silicon wafers, conventional photoresists, general packaging materials and basic electronic chemicals. The midstream focuses on chip design, wafer fabrication, standard testing and packaging. A large number of manufacturers at home and abroad occupy a major market share. The downstream serves consumer electronics brands, OEM factories and module manufacturers, widely used in smart home, digital audio and video, wearable devices and other fields, forming a complete industrial chain from raw material supply and chip production to end consumer applications.
