Abstracts

Wireless charging is the transmission of energy without wires from a power source to a consuming device. Wireless charging devices comprise a charging station (or transmitter) that transmits the energy, and a receiver (integrated inside a device) that receives the energy and charges the battery. It is a reliable, convenient, and safe technology to power and charge electrical devices. In addition, it provides multiple efficient, cost-effective, and safer advantages over the traditional charging systems by eliminating the use of physical connectors and cables. Moreover, it maintains continuous transfer of power to ensure all varieties of devices such as handheld industrial devices, smartphones, heavy-duty equipment, and others are charged and readily available to use.

SCOPE OF THE REPORT:
