According to our (Global Info Research) latest study, the global Consumer Electronics Wireless Charging market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Wireless charging is the transmission of energy without wires from a power source to a consuming device. Wireless charging devices comprise a charging station (or transmitter) that transmits the energy, and a receiver (integrated inside a device) that receives the energy and charges the battery. It is a reliable, convenient, and safe technology to power and charge electrical devices. In addition, it provides multiple efficient, cost-effective, and safer advantages over the traditional charging systems by eliminating the use of physical connectors and cables. Moreover, it maintains continuous transfer of power to ensure all varieties of devices such as handheld industrial devices, smartphones, heavy-duty equipment, and others are charged and readily available to use.

Mostly wireless power transfer are generally utilized in electronic devices such as smartphones, laptops, wearable electronics, and portable devices. Such rise in adoption of efficient charging system for portable electronics and wearable, which can potentially increase the durability of the device is projected to ensure significant growth of the electronics wireless charging market.
