The global Consumer Power Banks market size is expected to reach \$ 28397 million by 2032, rising at a market growth of 6.1% CAGR during the forecast period (2026-2032).

Consumer Power Banks are small lithium-ion or lithium-polymer battery products specifically designed to provide portable backup power for personal mobile devices. They are characterized by their lightweight portability, suitability for daily carrying, support for multiple output interfaces (such as USB-A, USB-C, or fast charging protocols), and typically have a capacity ranging from 5,000 to 20,000 mAh to meet the daily charging needs of devices such as mobile phones, tablets, and Bluetooth headsets. The consumer power bank market is trending towards thinner and lighter designs, higher energy density, multi-protocol fast charging, and intelligent management. With the diversification of mobile devices and the increasing demand for fast charging, consumers are increasingly demanding higher capacity, faster charging speeds, and greater portability from power banks, driving manufacturers to continuously upgrade their technologies in materials, packaging, thermal management, and intelligent protection circuits. Overall, the consumer power bank market continues to maintain steady growth, with innovation and standardization progressing in parallel, forming a long-term driving force for development. In 2025, the global production of Consumer Power Banks is estimated at approximately 1.326 billion units, with an average price of approximately US\$13.72 per unit and a gross profit margin of approximately 20-28%.
