Abstracts

The global Contact Wheel market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Contact wheels drive and provide backup support for abrasive belts. Contact wheels are available in a variety of face profiles, materials, and diameters. Contact wheels are available in conjunction with an abrasive belt and their hub style versatility allows them to be modified to adapt to many uses. There are many types of contact wheels available. Examples include a machine wheel, steel wheel, rubber wheel, plastic wheel, and a chain support wheel. A contact wheel along with coated abrasive belts are used on a variety of grinding, finishing, and polishing machinery governing unit pressure and speed against a work piece. A machine wheel is used in heavy machines, which are used to perform functions such as deburring, abrasive jet cutting, and water jetting. A steel wheel is a strong, easily repairable, and cheaply fabricated, which can be painted over and over again. A rubber wheel is always provided with a metal or alloy center and is usually used in vehicles on roads. A plastic wheel meets the basic needs of a winter tire package and is available in black color with a low material cost. A chain support wheel consists of chains, which pass over smooth wheels at the top. Other contact wheels are commonly available.
