Abstracts

According to our (Global Info Research) latest study, the global Contactless Biometrics Technology market size was valued at US\$ 16196 million in 2025 and is forecast to a readjusted size of US\$ 34853 million by 2032 with a CAGR of 11.5% during review period.

Contactless Biometrics Technology refers to hardware, software and integrated systems that capture, analyze and match an individual's unique physiological or behavioral characteristics without requiring physical contact with a sensor. Common modalities include facial recognition, iris recognition, palm-vein and finger-vein recognition, palmprint recognition, touchless fingerprint capture, voice recognition and multimodal combinations. A typical system consists of optical or infrared sensors, cameras, illumination components, biometric feature-extraction and matching algorithms, liveness detection, template databases and identity-management software. The technology is used for identity verification, authentication and identification in access control, border management, financial services, government identity programs, healthcare and consumer electronics, while conventional contact-based fingerprint scanners and non-biometric contactless technologies such as RFID and NFC are excluded.

Demand is driven by the need for faster, more hygienic and frictionless identity verification, alongside expanding digital services, automated border control, smart buildings and passwordless authentication. Business opportunities are strongest in liveness detection, multimodal authentication, mobile biometric onboarding, contactless palm and fingerprint capture, edge-based processing and privacy-preserving biometric template management. Suppliers can differentiate through higher recognition accuracy, resistance to spoofing and deepfakes, interoperability with existing identity platforms

and reliable operation under variable lighting or high-throughput conditions. Growth opportunities also exist in upgrading legacy fingerprint and card-based systems and providing scalable biometric platforms for government, finance, transportation, healthcare and enterprise security customers.
