## Abstracts

Contactless Car Washing Machine refers to automated cleaning systems designed to wash vehicles without direct physical contact. These systems utilize a combination of high-pressure water jets, detergents, and other cleaning agents to remove dirt, grime, and contaminants from the vehicle's exterior surfaces. The touchless approach aims to minimize the risk of scratches and swirl marks that can occur with traditional friction-based car wash methods. Typically found in car wash facilities and automotive service centers, touchless car wash equipment relies on sensors and advanced technology to precisely target and clean various parts of the vehicle, providing an efficient and thorough cleaning process while maintaining the integrity of the vehicle's finish.
