Abstracts

The connector is a device which links two elements of an electronic system without improper signal distortion or power loss. In any electronic system connector are the primary point of failure due to poor designing, mechanical stress and environmental stress, this become a major issue in industrial areas, factories where heavy machineries and robotics are used. To overcome this limitation, contactless connectivity system is practiced, contactless connectivity system is a cross interconnection between contactless power and contactless data technology which easily link over a short distance deprived of physical contact. This way practicing contactless connectivity system provides resistance from vibration, rotational freedom, freedom of movement, unlimited mating cycles, and easy on-the-fly connection. In traditional connectivity approach, standard full-contact wired power and signal connectors are practiced, this has many advantages and disadvantages.

SCOPE OF THE REPORT:

This report studies the Contactless Connectivity System market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the Contactless Connectivity System market by product type and applications/end industries.

Industries are upgrading with new technologies and robotic machinery as well as benefits of contactless connectivity system over traditional connectivity, is driving the market of contactless connectivity system globally. Where traditional connectivity has limitations due to space restrictions, vibrations, dust, and dirt, the need of reliable connection raised the need of contactless connectivity system which delivers ultimate

design flexibility as well as has less maintenance and installation efforts. The reason that lifts the market growth of contactless connectivity system worldwide is the factory environment where gasses, dust, and liquids combine with power, friction like robotic friction occur resulting into not only wear and tear but also causes the smallest arc, which might cause a very costly or deadly explosion. To overcome this, contactless connectivity system emerged as a solution by providing security to many environmental and operational challenges, while delivering flexible, reliable, and robust connectivity ? for both power and data.

The global Contactless Connectivity System market is valued at xx million USD in 2017 and is expected to reach xx million USD by the end of 2023, growing at a CAGR of xx% between 2017 and 2023.

The Asia-Pacific will occupy for more market share in following years, especially in China, also fast growing India and Southeast Asia regions.

North America, especially The United States, will still play an important role which cannot be ignored. Any changes from United States might affect the development trend of Contactless Connectivity System.
