According to our (Global Info Research) latest study, the global Contactless Expanded Beam Fiber Optic Connector market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Contactless expanded beam connections are contactless, meaning that the light signal traverses a small gap between two connector endfaces. Expanded beam connectors accomplish this using use lenses to expand and collimate light signals, which essentially expands the signal from smaller fiber core size into a much larger diameter and sends the light signals in parallel to each other. The expanded beam can be as much as 150 times larger than the original fiber core. A second lens then refocuses the light into the connecting fiber, essentially bringing the light signal back down to the smaller core diameter.
