## Abstracts

According to our (Global Info Research) latest study, the global Contactless Palm Vein Recognition market size was valued at US\$ 674 million in 2025 and is forecast to a readjusted size of US\$ 950 million by 2032 with a CAGR of 5.0% during review period.

Contactless palm vein recognition is a biometric identification technology that verifies a person by imaging the unique pattern of veins inside their palm without physically touching a sensor. It typically uses near-infrared light, which penetrates the skin and is absorbed by deoxygenated hemoglobin in the blood, making the vein network appear as a distinct dark pattern to an infrared camera; software then extracts features from this pattern and matches them against an enrolled template. Because the veins are internal (harder to copy than surface traits), and modern systems include liveness checks and anti-spoofing measures, it's often positioned as a high-security, hygienic authentication method for access control, payments, healthcare, and workplace attendance—especially where touch-free use reduces contamination risk and wear-and-tear on devices.

Upstream for a contactless palm vein recognition includes near-infrared illumination components (LED/laser diodes), optical parts (lenses, filters, protective windows), image sensors (typically NIR-sensitive CMOS/CCD), processing hardware (MCUs/SoCs, memory, connectivity modules), enclosure/mechanical design, and core algorithms/software such as image enhancement, vein pattern extraction, template generation/matching, liveness checks, encryption, and device firmware—often packaged by OEM/ODM biometric terminal makers or sensor module suppliers. Downstream, these systems are integrated by security and IT solution providers into applications like physical access control (doors, turnstiles), workforce time & attendance, visitor

management, ATM/branch authentication, hospital patient ID, public-sector ID and facility security, and high-assurance login for enterprise systems; end customers are typically enterprises, banks, healthcare institutions, schools, factories, and government agencies, with deployment also depending on integrators for installation, network integration, and ongoing maintenance/support.
