Abstracts

According to our (Global Info Research) latest study, the global Contactless Palmprint Recognition Access Control Machine market size was valued at US\$ 220 million in 2025 and is forecast to a readjusted size of US\$ 380 million by 2032 with a CAGR of 8.2% during review period.

In 2025, the global production of contactless palmprint recognition access control machines reached 420,000 units, with an average selling price of US\$509 per unit. Contactless palmprint recognition access control machines are a type of contactless access control terminal that uses palm biometrics as its core. They are biometric terminals used for access control in buildings, parks, computer rooms, and high-security areas. Their core function is to collect, compare, and authorize access based on the palm features of personnel. They are mainly used in scenarios requiring high security, contactlessness, and auditability, including buildings, facilities, data centers, control centers, airports, R&D areas, parking areas, hospitals, schools, corporate attendance systems, and public sector identity management. The upstream of the industry chain includes near-infrared optics and lighting modules, image sensors/cameras, processors and storage, displays, communication and interface modules, door locks/controllers, encryption and template management software, etc.; the midstream consists of manufacturers of complete terminal devices; and the downstream comprises system integrators, security engineering companies, building and park operation and maintenance providers, as well as government, finance, healthcare, education, manufacturing, and critical infrastructure users. From a business model perspective, this category typically doesn't sell hardware alone, but rather delivers a package including 'terminal + algorithm/SDK + controller/platform + installation and debugging + operation and maintenance services,' so profits don't solely come from the reader itself. Based on

comparable biometric security companies, ZKTeco's overall gross profit margin over the past 12 months is approximately 50.24%. Considering the reality that Anviz charges separately for software, support, and installation services, a more reasonable industry assessment is that the gross profit margin for standalone hardware is moderately high, while the gross profit margin for complete solutions is higher than that of standalone hardware. However, there is no standardized value for the 'gross profit margin of a single palmprint access control device' disclosed in the public market. The gross profit margin is estimated to be in the range of approximately 20%–45%.
