Abstracts

According to our (Global Info Research) latest study, the global Contactless PoS Terminals market size was valued at US\$ 5384 million in 2025 and is forecast to a readjusted size of US\$ 8441 million by 2032 with a CAGR of 7.0% during review period.

In 2025, global Contactless PoS Terminals production reached approximately 80,500 k units with an average global market price of around US\$ 65 per unit, and a gross profit margin of approximately 20%-40%. Contactless PoS Terminals are point-of-sale devices that accept payments via NFC tap-to-pay, enabling customers to pay with contactless cards, mobile wallets, and wearable devices. They integrate secure elements, EMV contactless kernels, and encryption to process transactions quickly and safely. Many models also support chip, magstripe, and QR-based wallets, while connecting to merchant systems for receipts, reporting, and settlement. By reducing checkout time and physical contact, they improve customer experience and support high-throughput environments such as retail, hospitality, transit, and field services. The industrial chain of Contactless PoS Terminals includes upstream NFC controllers, secure elements, card-reader modules, processors, memory, displays, touch panels, batteries, printers, antennas, communication modules, housings, and power components. Midstream work covers terminal design, assembly, firmware, payment application integration, EMV/contactless compliance testing, quality control, and device management software. Downstream users include retail and restaurant merchants, transport operators, service providers, and acquiring ecosystems that deploy terminals at scale. Supporting services include onboarding, remote updates, cybersecurity maintenance, repairs, and lifecycle replacement.

The contactless PoS terminal market is expanding as tap-to-pay becomes a standard

payment behavior across retail and services. Adoption is driven by faster checkout, improved hygiene preferences, and growing usage of mobile wallets and contactless cards. Merchants increasingly prefer smart terminals that combine NFC with chip/QR acceptance, reliable connectivity, and remote device management to reduce operational friction. Upgrade cycles are accelerated by compliance requirements, software security updates, and the need for better fraud controls such as tokenization and risk monitoring. Competition is intensifying as hardware commoditizes, pushing suppliers to differentiate through bundled acquiring, software subscriptions, analytics, and vertical features for restaurants, convenience retail, and mobility. Overall growth should remain strong as contactless penetration rises in emerging markets and more small merchants digitize payments.
