Contactless Power Transmission (CPT), also known as Wireless Power Transfer (WPT) or wireless power transmission, is a transmission mode that transfers electric energy from the power source to the power-consuming device through invisible soft media in space (such as electric fields, magnetic fields, microwaves, etc.). This technology does not rely on the traditional power transmission method of direct physical contact between electrical conductors, but converts electric energy into other forms of relay energy (such as electromagnetic field energy, lasers, microwaves and mechanical waves, etc.), transmits it over a certain distance, and then converts the relay energy back to electric energy through the receiver, thereby realizing wireless transmission of electric energy.
