Abstracts

The global Contactless Rotary Angle Sensor market size is expected to reach \$ 195 million by 2032, rising at a market growth of 8.7% CAGR during the forecast period (2026-2032).

In 2025, global Contactless Rotary Angle Sensor production reached approximately 1,624 k units, with an average global market price of around US\$ 57 per unit. Gross margin is about 44%. The cost is 32 usd per unit, the production is 3,000 k units. Contactless Rotary Angle Sensors refer to sensors that measure the angular position, rotational displacement, rotational direction, or speed of a rotating object without physical contact between the sensing element and the rotating part. These sensors typically use Hall-effect, magnetoresistive, inductive, optical, or capacitive technologies to achieve high reliability, long service life, and low wear. Non-contact rotary angle sensors are widely used in automotive systems, industrial automation, robotics, electric motors, aerospace equipment, and consumer electronics because they provide accurate position feedback while reducing mechanical friction and maintenance requirements.
