According to our (Global Info Research) latest study, the global Contactless Voltage Stabilizer market size was valued at US\$ 888 million in 2024 and is forecast to a readjusted size of USD 1267 million by 2031 with a CAGR of 5.3% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Contactless Voltage Stabilizer is a new generation of fast voltage stabilization equipment. It adopts high-speed computing and metering single-chip microcomputer control technology, fast AC sampling technology, effective value correction technology, current zero-crossing switching technology and fast compensation voltage stabilization technology. It controls several thyristor voltages to cross zero and switch in a specific order to change the size and polarity of the compensation voltage, thereby realizing the voltage stabilization function. The contactless voltage stabilizer is mainly composed of an isolation transformer, an SCR module, a CPU control core, a fast voltage stabilization technology and a safety protection device. It realizes full contactless control, safe and efficient, high-precision, high-speed response, complete functions, strong overload capacity, no distortion, and low loss. It is widely used in industry, transportation, national defense, communications and other fields. It is particularly suitable for electrical equipment that requires highly reliable and highly stable power supply and harsh power consumption environments with large power grid fluctuations and instantaneous voltage changes. It is one of the important equipment to ensure the stable operation of electrical equipment.
