According to our (Global Info Research) latest study, the global Contactor for Electric Vehicle market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Electric vehicle contactor is a kind of electrical switching equipment, which is specially used in the power system of electric vehicles. It plays an important role in the high-voltage battery, electric drive system and charging system of electric vehicles. Contactors for electric vehicles are mainly used to control high current and high voltage in electric vehicle circuits. They usually consist of high power relays or solid state relays and are used to switch or control different circuits in electric vehicle systems.

The following are some of the main functions of contactors for electric vehicles:

Battery Disconnect: Contactors for electric vehicles can cut off the connection between the battery and the electric vehicle system to disconnect the high voltage power supply in an emergency.

Electric drive control: Contactors can control the power supply to the electric vehicle motor to make it start, stop and adjust the speed.

Charging system control: The contactor can be used to control the charging system of the electric vehicle, including connecting and disconnecting the circuit between the electric vehicle and the charging pile.

Auxiliary circuit control: In addition to the main electric drive system, electric vehicles

also have various auxiliary circuits, such as air conditioning systems, power steering systems, etc. Contactors can be used to control the power supply to these auxiliary circuits.

Contactors for electric vehicles need to have high current and high voltage carrying capacity to meet the requirements of electric vehicle systems. They also need to be highly reliable, responsive and durable to ensure proper operation and safety of electric vehicles.
