Containerised Self Bunded Tanks are double-walled fuel storage solutions designed for safe, efficient storage and transport of various liquid substances, such as fuels and oils. The 'self-bunded' design means they have an inner tank that holds the liquid and an outer tank that acts as a secondary containment barrier, preventing leaks or spills. These tanks are built to be containerized, meaning they can fit within standard shipping container dimensions, which allows for easy transportation and installation. They are commonly used in industries such as mining, agriculture, and construction where fuel storage and mobility are crucial, providing a secure, environmentally-friendly, and cost-effective solution for liquid storage.
