Abstracts

The global Content Moderation Automation market size is expected to reach \$ 1252 million by 2032, rising at a market growth of 7.8% CAGR during the forecast period (2026-2032).

Content Moderation Automation refers to an intelligent risk control process that utilizes technologies such as artificial intelligence, machine learning, and rule engines to replace or assist manual processes in automatically identifying, classifying, intercepting, and handling massive amounts of digital content. Its core lies in building a fully automated closed loop from content access, violation detection, policy execution to handling feedback, minimizing human intervention. The system uses multimodal technologies such as image recognition, natural language processing, audio feature analysis, and video fingerprint comparison to perform millisecond-level real-time review of text, images, audio, and video content, and supports custom policy configuration, dynamic model iteration, and proactive defense against adversarial examples. This technology has been deeply embedded in the business processes of social platforms, live-streaming e-commerce, and online games, serving as the infrastructure to address the dual challenges of increasingly stringent global regulations and content explosion.

Intelligence: With the continuous development of artificial intelligence technology, the content review automation system will become more intelligent, able to better identify and process various contents, and improve review efficiency and accuracy.

Multimodality: With the continuous advancement of image recognition, speech recognition and other technologies, the mode of content review automation will develop from a single text review to multi-modal review such as image and voice, which can handle more complex and diverse content. **Real-time performance:** With the continuous acceleration of network technology and optimization of review algorithms, the real-time

performance of content review automation will be further improved, enabling rapid response and processing of large amounts of content to meet the needs of real-time interaction and dissemination. Personalization: With the continuous diversification and personalization of user needs, the personalization and customization requirements of content review automation will gradually increase, and it can be flexibly configured and adjusted according to different user needs and scenarios. Data privacy and security: As data privacy and security issues continue to become prominent, the content review automation system will pay more attention to data privacy and security protection to ensure the security and privacy of user data.
