Abstracts

The global Contezolid market size is expected to reach \$ 47.81 million by 2032, rising at a market growth of 4.3% CAGR during the forecast period (2026-2032).

In 2025, global Contezolid production reached approximately 85,000 units. Contezolid is a novel oxazolidinone antibacterial agent primarily used for the treatment of infections caused by Gram-positive bacteria, especially drug-resistant strains such as methicillin-resistant *Staphylococcus aureus* (MRSA), against which it demonstrates strong antibacterial activity. Its mechanism of action involves inhibiting bacterial protein synthesis, thereby preventing bacterial growth and proliferation.

Compared with traditional drugs of the same class, contezolid maintains effective antibacterial activity while exhibiting a lower incidence of adverse reactions, particularly showing improved safety in terms of myelosuppression and gastrointestinal side effects. In addition, the drug has good oral bioavailability and is convenient to use, making it suitable for the treatment of various infectious diseases, including community-acquired pneumonia and complicated skin and soft tissue infections. Overall, as a new antibacterial agent, contezolid shows promising potential in addressing infections caused by drug-resistant bacteria.

Contezolid, as a new-generation oxazolidinone antibacterial agent, is primarily positioned in the treatment market for infections caused by Gram-positive drug-resistant bacteria. It is particularly driven by strong clinical demand in the context of the increasing prevalence of drug-resistant infections such as methicillin-resistant *Staphylococcus aureus* (MRSA). From a market perspective, established drugs of the same class, such as linezolid, have already secured a certain market share; however, their long-term use is associated with adverse effects such as myelosuppression,

creating opportunities for newer alternatives. Improvements in the safety profile of contezolid provide it with differentiated competitive advantages, especially in long-term treatment and use in special patient populations. In the Chinese market, with the continued implementation of antimicrobial stewardship policies and the growing emphasis on drug-resistant infections in hospitals, novel antibacterial agents with improved safety and efficacy are gradually gaining clinical acceptance. Meanwhile, policy support encouraging the development of innovative drugs also provides favorable conditions for the promotion of contezolid. From a global perspective, antimicrobial resistance has become a major public health challenge, driving sustained demand for new antibiotics. Contezolid is therefore expected to expand into overseas markets through international regulatory approvals in the future.
