Abstracts

Modern aerosol spray products have three significant parts: the can, the actuator, and the valve. The valve is crimped to the rim of the can, and the design of this component determines the spray rate. The actuator is pressed down by the user to open the valve. The shape and size of the nozzle in the actuator is used to control the spread of the aerosol spray. Scope of the Report:

This report focuses on the Continuous Aerosol Valve in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. In a continuous aerosol, the valve is equipped with a fast filling housing in which gas orifice (VPH) and product orifice (RTP) can be of various dimensions. The dip tube is mounted outside the housing tang, and the valve should be used in upright position. The worldwide market for Continuous Aerosol Valve is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
