According to our (Global Info Research) latest study, the global Continuous Basalt Fiber Sleeves market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

Basalt Fiber is a material made from extremely fine fibres of basalt, which is composed of the minerals plagioclase, pyroxene, and olivine. It is similar to carbon fibre and fibreglass, having better physic mechanical properties than fibreglass, but being significantly cheaper than carbon fibre. It is used as a fireproof textile in the aerospace and automotive industries and can also be used as a composite to produce products such as camera tripods.

Basalt Fiber is made from a single material, crushed basalt, from a carefully chosen quarry source and unlike other materials such as glass fibre, essentially no materials are added. The basalt is simply washed and then melted.

Global Basalt Fiber market is projected to reach US\$ 114.1 million in 2029, increasing from US\$ 62 million in 2022, with the CAGR of 9.0% during the period of 2023 to 2029.

Demand from Construction and Fire Control are the major drivers for the industry.

North America is the largest Basalt Fiber market, with a share about 40%, followed by China and Europe with a share both about 28%.
