According to our (Global Info Research) latest study, the global Continuous Basalt Fibers market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Continuous basalt fibers (CBF) are obtained by melting basalt rocks and forcing them through small pores. The rocks are crushed into powder, and then passed through a furnace, followed by drawing them into strands using platinum rhodium drawing filament laminate. They possess remarkable acid and alkali-resistant properties and exhibits high UV resistance, low hygroscopic property, superior radiation & environmental resistance, and decent sound insulation.

The development of technologies will help the market grow in different areas and manufactures advanced product such as tapes, fabrics, yarns, chopped fiber, non-woven, reinforcing mesh, and roving fabrics. With the rising technology, the continuous basalt fiber can be used in a wide range of applications such as textile technologies such as spinneret technology from the melt.
