Abstracts

Continuous basalt fibers (CBF) are obtained by melting basalt rocks and forcing them through small pores. The rocks are crushed into powder, and then passed through a furnace, followed by drawing them into strands using platinum rhodium drawing filament laminate. They possess remarkable acid and alkali-resistant properties and exhibits high UV resistance, low hygroscopic property, superior radiation & environmental resistance, and decent sound insulation.

Scope of the Report:

This report focuses on the Continuous Basalt Fibers in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa.
