## Abstracts

According to our (Global Info Research) latest study, the global Continuous Capacitive Sensor market size was valued at US\$ 347 million in 2024 and is forecast to a readjusted size of USD 521 million by 2031 with a CAGR of 6.0% during review period.

Continuous Capacitive Sensor is a type of sensor that uses capacitance changes to continuously measure physical quantities. It realizes non-contact measurement of the target object by detecting the change of capacitance, and has the characteristics of high precision and fast response. This kind of sensor is widely used in the measurement of displacement, pressure, liquid level, thickness and other physical quantities, especially in the need of high precision and real-time monitoring. Its working principle is based on changes in capacitance, which can be caused by changes in electrode spacing, area, or medium.
