Scope of the Report:

This report studies the Continuous Delivery market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the Continuous Delivery market by product type and applications/end industries.

The scope of this report covers the continuous delivery market analysis by deployment mode, organization size, vertical, and region. Continuous Delivery practice tools target phases, such as coding and building, testing and quality assurance, managing and deployment, support and maintenance, and collaboration and communication.

Continuous Delivery software identified in the study targets several stages, such as continuous integration, continuous testing, and release automation. The benefits of continuous delivery practices allow businesses to accelerate their delivery cycles and reduce mean time to repair, thereby resulting in the increasing adoption of continuous delivery software.

The on-premises deployment mode is estimated to hold the larger market share in 2018, owing to better confidential information control and security from external attacks as systems are held internal to organizations. The cloud technology is steadily gaining acceptance from various enterprises across the globe, as cloud-based software and applications are cost-efficient and can be deployed even in a basic IT infrastructure. The large enterprises segment is expected to dominate the continuous delivery market. APAC is the hub for Small and Medium-sized Enterprises (SMEs), hence SMEs in this region would adopt continuous delivery tools rapidly, which in turn, is expected to boost the growth of the overall market within the next 5 years.
