Abstracts

The global Continuous Emission Monitoring Systems (CEMS) market size is expected to reach $ 1768 million by 2032, rising at a market growth of 4.3% CAGR during the forecast period (2026-2032).

In 2025, global Continuous Emission Monitoring Systems (CEMS) production reached approximately 32,627 units with average price of 39,000 USD/Unit.

A Continuous Emission Monitoring System is an integrated monitoring solution installed on industrial stacks, ducts, exhaust outlets, or marine exhaust systems to continuously or frequently measure pollutant concentrations, flue-gas conditions, and emission rates. A typical system consists of sampling probes, heated sample lines, gas-conditioning units, gas analyzers, particulate monitors, flow and temperature-pressure-moisture sensors, calibration equipment, and a data acquisition and handling platform. Depending on the application, it may monitor sulfur dioxide, nitrogen oxides, carbon monoxide, particulate matter, oxygen, volatile organic compounds, hydrogen chloride, hydrogen fluoride, ammonia, mercury, and carbon dioxide. Its principal function is to convert analyzer measurements into concentration or mass-emission results expressed in the units required by applicable environmental standards.

The upstream segment includes infrared sources, lasers, optical components, gas sensors, particulate detectors, flow meters, temperature-pressure-moisture sensors, sampling pumps, valves, filters, heated lines, gas coolers, calibration gases, and industrial computers. The midstream consists of analyzer manufacturers, complete-system suppliers, engineering integrators, environmental software providers, and third-party operation and maintenance companies. These participants undertake system

design, equipment integration, installation, commissioning, calibration, data connectivity, and lifecycle maintenance. Major downstream industries include thermal power generation, waste incineration, cement, iron and steel, non-ferrous metallurgy, refining and chemicals, glass, pulp and paper, industrial boilers, and marine transportation. In addition to equipment sales, recurring services such as calibration, consumable replacement, spare parts, data validation, and outsourced maintenance represent an increasingly important revenue stream.

The market is expected to benefit from tighter emission regulations, wider pollutant coverage, and the replacement of aging installed systems. Regulatory frameworks in China define detailed requirements for system configuration, installation, acceptance, quality assurance, operation, and data processing, while United States regulations use continuous monitoring data for compliance determination and emission accounting. The revised European industrial-emissions framework is also strengthening environmental management, data collection, and transparency obligations. Future demand will expand beyond conventional sulfur dioxide, nitrogen oxides, and particulate monitoring toward mercury, volatile organic compounds, acid gases, ammonia slip, greenhouse gases, and marine exhaust emissions. Lower emission limits will require improved detection limits, interference resistance, and long-term stability, supporting demand for advanced optical technologies, multi-component analyzers, predictive diagnostics, cloud connectivity, and remote maintenance. Marine air-emission controls and expanding carbon monitoring, reporting, and verification activities are also expected to create additional growth opportunities.

Report Scope

This report studies the global Continuous Emission Monitoring Systems (CEMS) production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Continuous Emission Monitoring Systems (CEMS) and provides market size (US$ million) and Year-over-Year (YoY) Growth, considering 2025 as the base year. This report explores demand trends and competition, as well as details the characteristics of Continuous Emission Monitoring Systems (CEMS) that contribute to its increasing demand across many markets.

Highlights and key features of the study

Global Continuous Emission Monitoring Systems (CEMS) total production and

Global Continuous Emission Monitoring Systems (CEMS) production by manufacturer, production, price, value and market share 2021-2026, (USD Million) & (Units)

Global Continuous Emission Monitoring Systems (CEMS) production by Technology, production, value, CAGR, 2021-2032, (USD Million) & (Units)

Global Continuous Emission Monitoring Systems (CEMS) production by Application, production, value, CAGR, 2021-2032, (USD Million) & (Units)

This report profiles key players in the global Continuous Emission Monitoring Systems (CEMS) market based on the following parameters - company overview, production, value, price, gross margin, product portfolio, geographical presence, and key developments. Key companies covered as a part of this study include ABB Ltd., Siemens AG, HORIBA, Ltd., Beijing SDL Technology Co., Ltd., Endress+Hauser SICK GmbH+Co. KG, Emerson Electric Co., Focused Photonics Inc., ENVEA, Fuji Electric Co., Ltd., Shimadzu Corporation, etc.

This report also provides key insights about market drivers, restraints, opportunities, new product launches or approvals.

Stakeholders would have ease in decision-making through various strategy matrices used in analyzing the World Continuous Emission Monitoring Systems (CEMS) market

Detailed Segmentation:

Each section contains quantitative market data including market by value (US$ Millions), volume (production, consumption) & (Units) and average price (K USD/Unit) by manufacturer, by Technology, and by Application. Data is given for the years 2021-2032 by year with 2025 as the base year, 2026 as the estimate year, and 2027-2032 as the forecast year.
