A continuous epidural tray refers to a specialized medical kit used in hospitals and clinical settings for administering continuous epidural anesthesia or pain relief. It typically includes sterile components such as epidural catheters, local anesthetics, syringes, and sterile drapes. These trays are designed to ensure proper placement and maintenance of the epidural catheter, allowing healthcare providers to deliver a consistent flow of medication directly into the epidural space near the spinal cord. Continuous epidural trays play a crucial role in managing pain during labor, postoperative recovery, and in chronic pain management, providing patients with targeted relief while under medical supervision.
