According to our (Global Info Research) latest study, the global Continuous Flow Ultracentrifuge System market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Continuous Flow Ultracentrifuge System is a device used for high-speed separation and purification of biomolecules (such as proteins, DNA, RNA, etc.). It uses centrifugal force to separate biomolecules in solution according to their density and size, thereby achieving sample separation and enrichment.

Unlike traditional desktop ultracentrifuges, the Continuous Flow Ultracentrifuge System uses continuous sampling and continuous centrifugation to achieve high-efficiency, high-throughput biological separation and purification. Usually used in biochemistry, biomedicine, biopharmaceutical and other fields where large-scale production and efficient purification of biomolecules are required. It has the characteristics of high speed, efficiency and automation, can quickly process a large number of samples, and can be adjusted and optimized as needed, making it suitable for biological separation and purification work of various scales.
