According to our (Global Info Research) latest study, the global Continuous Flow Wet Chemistry Analyzers market size was valued at US\$ 776 million in 2025 and is forecast to a readjusted size of US\$ 1116 million by 2032 with a CAGR of 5.4% during review period.

The continuous flow wet chemistry analyzer is an efficient instrument based on the principle of wet chemical reaction, combining fluid dynamics and automated detection technology to achieve continuous sample injection and rapid analysis. It is widely used in environmental monitoring, water quality analysis, agriculture, food testing, chemical industry and other fields. Its core principle is to mix the sample and reagent in proportion in a thin flow tube through a peristaltic pump, and after the chemical reaction is completed in a specific reaction section, the concentration of the reaction product is detected by colorimetry, fluorescence or electrochemistry, so as to quantitatively analyze the target substance. The instrument is usually equipped with a multi-channel module that can detect multiple parameters at the same time to improve experimental efficiency.
