The global Continuous Fluid Bed Dryer market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029). Continuous Fluid Bed Dryer is a common industrial drying equipment that removes moisture from materials by drying them in an airflow. The material is placed in a fluidized bed, heated by a heater, and dried by the drying air sent into the drying zone. The generated moisture is discharged through the exhaust port while the material completes the drying process under continuous airflow. Continuous Fluid Bed Dryer is characterized by easy operation, high drying efficiency, low energy consumption, and suitability for drying various materials. It is widely used in industries such as pharmaceuticals, chemicals, and food.
