Continuous linear heat detection (LHD) is a continuous heat detector designed to detect heat along the length of a sensor cable. It can detect a fire anywhere along the length of the cable, and can be of lengths in excess of a kilometer.

Market growth will be driven primarily by the need for improved fire safety systems in fire-prone industrial environments. The demand for fire alarm and detection will grow as facilities in the residential and commercial sectors continue to improve and fire detection awareness continues to grow. Advances in technology, rising fire safety awareness, expanding urbanization, and industrialization are expected to drive the growth of the fire alarm and detection market. The expansion of the commercial and industrial sectors and increased fire safety awareness have had a positive impact on the business environment.
